DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of Group I, claims 1-7, in the reply filed on 4/15/2004 is acknowledged.
2. Claims 8 and 9 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 4/15/2004.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Yoshida et al. (hereinafter Yoshida) (English Translation of JP 11-339228).

- Regarding claims 1-4, Yoshida discloses method of making a magnetoresistive head element, comprising:

forming a magnetoresistive film extending over a surface of a substratum, said magnetoresistive film having a side surface standing on the surface of the substratum (section 0019);

forming an insulating base layer over the surface of the substratum, said insulating base layer contacting at least partly the side surface of the magnetoresistive film (section 0019); and

Art Unit: 2653

effecting an etching process while keeping the insulating base layer contacting the side surface of the magnetoresistive film (section 0021; Figure 2).

Allowable Subject Matter

4. Claims 5-7 are allowed. The following is a statement of reasons for the indication of allowable subject matter:

- Claim 5 specifies a method of making a magnetoresistive head element which requires
“removing the layered composite and the material layers in a region adjacent the resist films so as to shape the magnetoresistive film and the domain control stripe layers out of the layered composite and the material layers below the resist film”
and *“removing the resist film so as to expose the magnetoresistive film and the domain control stripe layers at a gap defined in the insulation base layer.”*

Yoshida does not teach or suggest the above-mentioned limitations of the claimed invention.
